

Sujal Lamichhane

SOC Analyst | Security Researcher | Certified Ethical Hacker (CEH v13)
Chitwan, Nepal | +977-9862547747 | lamichhanesujal18@gmail.com

Professional Summary

Cybersecurity professional with hands-on SOC internship experience and a strong foundation in threat detection, log correlation, and incident response. Proficient in multi-platform SIEM environments including Splunk, Wazuh, and FortiSIEM, as well as endpoint protection through CrowdStrike Falcon and Microsoft Defender for Endpoint. Skilled at applying the MITRE ATT&CK framework and Cyber Kill Chain to accelerate alert triage, reduce false-positive rates, and support L1/L2 security operations. CEH v13 certified with practical lab experience simulating real-world attack scenarios and 24/7 SOC workflows. Seeking an entry-level SOC Analyst position to contribute to proactive threat monitoring and enterprise cyber defense.

Core Competencies

- Alert Triage & Incident Escalation (L1/L2)
- MITRE ATT&CK Mapping & Detection Engineering
- IOC/IOA Identification & Threat Intelligence
- Cyber Kill Chain & Attack Lifecycle Analysis
- Network Security Design & IDS/IPS Operations
- SIEM Log Correlation & Threat Detection
- Endpoint Threat Monitoring (EDR/XDR)
- SOAR Playbook Automation
- Vulnerability Assessment & Risk Analysis
- Compliance: NIST CSF, ISO 27001, PCI-DSS, HIPAA

Technical Skills

SIEM / Logging	Splunk, Wazuh, FortiSIEM, LogPoint, AlienVault OSSIM
EDR / Endpoint	CrowdStrike Falcon, Microsoft Defender for Endpoint
SOAR / Ticketing	TheHive, Cortex, Shuffle SOAR, Incident Ticket and Escalation Workflow
Network Security	Suricata IDS, pfSense Firewall, Sophos Firewall, Wireshark, MikroTik
Vuln. Assessment	Nmap, Nessus, OpenVAS, Burp Suite
VPN / Infrastructure	IPsec IKEv2, SSL VPN, LAN/WAN Design, MPLS Architecture (GNS3)
Systems / VM	Windows Server 2019/2022, Active Directory, Kali Linux, Ubuntu, VMware ESXi, Hyper-V
Scripting	Python (log parsing, task automation), Bash Scripting
Frameworks	MITRE ATT&CK, Cyber Kill Chain, Zero Trust, NIST CSF, CIA Triad, Defense-in-Depth

Internship Experience

SOC Analyst Intern — CryptoGen Nepal 2025 – 2026

- Monitored and triaged 100+ daily security alerts across Splunk, Wazuh, FortiSIEM, and LogPoint; escalated confirmed incidents per defined SOC runbooks and severity matrices.
- Performed endpoint threat analysis using CrowdStrike Falcon and Microsoft Defender for Endpoint, investigating suspicious process execution, lateral movement indicators, and malware artifacts.
- Conducted structured log correlation across network, endpoint, and application sources to identify attack patterns mapped to MITRE ATT&CK tactics including Initial Access, Execution, Persistence, and Exfiltration.
- Reduced false-positive alert volume by refining SIEM detection rules and correlation logic, improving analyst efficiency during shift operations.
- Managed incident tickets end-to-end — from initial detection and triage through escalation, containment recommendation, and post-incident closure documentation.

- Enriched threat investigations via IOC lookups (malicious IPs, domains, file hashes) against open-source threat intelligence feeds.
- Authored structured incident response reports and compliance monitoring summaries presented in weekly security reviews.

Projects

Unified SOC Framework Integration

Major Project

- Architected an end-to-end multi-layer SOC environment integrating pfSense perimeter firewall, Suricata IDS, Wazuh SIEM, and Shuffle SOAR for automated incident detection and response.
- Developed SOAR playbooks automating alert enrichment, IOC blocking, and analyst notification workflows, reducing simulated mean-time-to-respond (MTTR) by approximately 40%.
- Built MITRE ATT&CK detection mappings covering 15+ attack techniques across reconnaissance, privilege escalation, and data exfiltration stages.
- Integrated threat intelligence enrichment pipelines to correlate live events against known threat actor TTPs in near real time.

Multi-Layer Security Integration — SIEM-Based Defense Environment

Minor Project

- Deployed a defense-in-depth monitoring lab using Wazuh, Suricata, and ELK Stack to replicate production SOC detection workflows.
- Executed 10+ simulated attack scenarios including brute force, port scanning, privilege escalation, and C2 beaconing, and validated detection coverage against each attack vector.
- Documented detection gaps and tuned alert rules to improve signal-to-noise ratio under simulated 24/7 monitoring conditions.

Site-to-Site IPsec VPN Deployment

- Configured AES-256 / IKEv2 encrypted VPN tunnel between pfSense and MikroTik routers for secure inter-site communication.
- Applied firewall hardening policies, NAT bypass rules, and split-tunneling configuration for optimized secure traffic flow.

MPLS Layer 3 VPN Architecture — Advanced Networking

- Designed and simulated a full MPLS L3 VPN topology in GNS3, configuring PE/CE routers for multi-site enterprise routing with label-switched path verification and secure backbone segmentation.

Education

Bachelor of Information Technology

2023 – 2026 (Expected)

Forbes College, Bharatpur, Chitwan, Nepal

Certifications

- Certified Ethical Hacker v13 — EC-Council

Professional Attributes

- Experienced operating in shift-based, high-volume alert environments with structured escalation discipline.
- Methodical and detail-oriented approach — each investigation is documented, escalated with context, and closed with a complete audit trail.
- Proactively develops skills through hands-on lab work, home lab simulations, and continuous threat intelligence research.
- Strong written communication for incident reports, SOC runbooks, and stakeholder-level security briefings.
